4. Solved Examples

## 1. Introduction

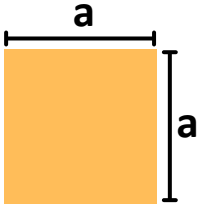

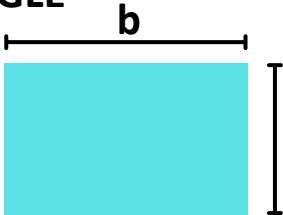

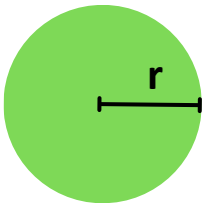

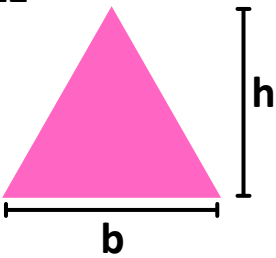

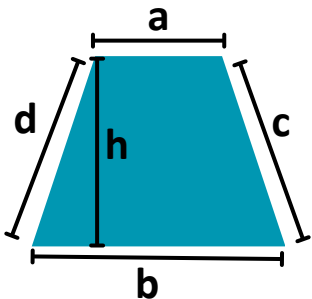

- The amount of space inside of any 2-Dimensional shape is Area
- Calculation of area for every shape is done in different way
- The Area is measured in square units.

- The sum of sides of any shape it is made up of is known as Perimeter (the distance around a shape)
- Calculation of Perimeter for almost every shape is common.
- The Perimeter is measured in linear units.

# Area and Perimeter - GCSE Maths

## 2. Area and Perimeter of different shapes -

SHAPE	AREA	PERIMETER
<b>SQUARE</b> 	$a \times a$ $(\text{side})^2$	$a + a + a + a = 4a$ $(4 \times \text{sides})$
<b>RECTANGLE</b> 	$l \times b$	$2 \times (l + b)$
<b>CIRCLE</b> 	$\pi \times \text{radius}^2$	$2 \times \pi \times \text{radius}$
<b>TRIANGLE</b> 	$(1/2) \times \text{base} \times \text{height}$	sum of all three sides
<b>TRAPEZIUM</b> 	$A = 1/2 \times (a + b) \times h$	$P = a + b + c + d$

## 3. Real life Examples of Area and Perimeter

# Area and Perimeter - GCSE Maths

## 4. Solved Examples

**Example:** Find the area and perimeter of circles with radius equal to -

1)  $r = 5\text{cm}$

2)  $r = 7\text{cm}$

**Solution: (1)** The Area and Perimeter of circle with radius 5cm -

$$\text{Area} = \pi \times \text{radius}^2$$

$$= \pi \times (5)^2 \quad (\text{using } \pi = 3.14)$$

$$= (3.14 \times 25) \text{ cm}^2$$

$$= 78.5 \text{ cm}^2$$

$$\text{Perimeter} = 2 \times \pi \times \text{radius}$$

$$= (2 \times 3.14 \times 5) \text{ cm}$$

$$= 31.4 \text{ cm}$$

**(2)** The Area and Perimeter of circle with radius 7cm -

$$\text{Area} = \pi \times \text{radius}^2$$

$$= \pi \times (7)^2$$

$$= (3.14 \times 49) \text{ cm}^2$$

$$= 153.86 \text{ cm}^2$$

$$\text{Perimeter} = 2 \times \pi \times \text{radius}$$

$$= (2 \times 3.14 \times 7) \text{ cm}$$

$$= 43.96 \text{ cm}$$

# Area and Perimeter - GCSE Maths

**Example:** If a rectangular field is of the following dimensions find its area and length of required fence for the field -

Length = **20cm**, Breadth = **15cm**

**Solution:** To find the length of required fence for the field we will find out the perimeter -

$$\begin{aligned}\text{Perimeter} &= 2 \times (\text{Length} + \text{Breadth}) \\ &= 2 \times (20 + 15) \text{ cm} \\ &= 2 \times 35 \text{ cm} \\ &= 70 \text{ cm}\end{aligned}$$

$$\begin{aligned}\text{Area} &= \text{Length} \times \text{Breadth} \\ &= (20 \times 15) \text{ cm}^2 \\ &= 300 \text{ cm}^2\end{aligned}$$

# Area and Perimeter - GCSE Maths

**Example:** Find the the Area and Perimeter of the following 2 Dimensional shapes -

**Solution:** (a) The Area and Perimeter of Trapezium -

$$\begin{aligned}\text{Area} &= \frac{1}{2} \times (\text{parallel sides}) \times \text{height} \\ &= \left[ \frac{1}{2} \times (3 \times 5) \times 4 \right] \text{cm}^2 \\ &= \left( \frac{1}{2} \times 15 \times 4 \right) \text{cm}^2 \\ &= \left( \frac{75}{2} \right) \text{cm}^2 \\ &= 37.5 \text{ cm}^2\end{aligned}$$

Perimeter of Trapezium -

$$\begin{aligned}\text{Perimeter} &= \text{Sum of all the sides} \\ &= (3 + 3 + 4 + 4) \text{cm} \\ &= 14 \text{ cm}\end{aligned}$$

# Area and Perimeter - GCSE Maths

(b) Area and Perimeter of a square having a side equal to 4cm -

$$\text{Area} = (\text{side})^2$$

$$= (4 \text{ cm})^2$$

$$= 16 \text{ cm}^2$$

$$\text{Perimeter} = 4 \times \text{side}$$

$$= 4 \times 4 \text{ cm}$$

$$= 16 \text{ cm}$$

(c) Area and Perimeter of a Triangle with base equal to 4cm and height equal to 4cm -

$$\text{Area} = \frac{1}{2} \times \text{Base} \times \text{Height}$$

$$= \frac{1}{2} \times 4 \times 4 \text{ cm}^2$$

$$= \frac{16}{2} \text{ cm}^2 = 8 \text{ cm}^2$$

$$\text{Perimeter} = \text{Sum of all the sides}$$

$$= (4 + 4 + 4) \text{ cm}$$

$$= 12 \text{ cm}$$

# Area and Perimeter - GCSE Maths

**Example:** Work out the area of the following shapes -

**Solution:**

(a) The shape is combination of three shapes the two semi-circles and one square. The area of this shape will be -

$$\begin{aligned}\text{Area} &= 2 \times \text{Area of semi-circle} + \text{Area of Square} \\ &= 2 \times \pi r^2 + (\text{Side})^2 \\ &= 2 \times [3.14 \times (3)^2] + (5)^2 \text{ cm}^2 \quad (\text{using } \pi = 3.14) \\ &= (56.52 + 25) \text{ cm}^2 \\ &= 81.52 \text{ cm}^2\end{aligned}$$

(b) The shape is combination of two Rectangles and one square -

$$\begin{aligned}\text{Area} &= \text{Area of 1}^{\text{st}} \text{ rectangle} + \text{2}^{\text{nd}} \text{ rectangle} \\ &\quad + \text{Area of square} \\ &= (2 \times 3) + (6 \times 3) + (3 \times 3) \text{ cm}^2 \\ &= 6 + 18 + 9 \text{ cm}^2 \\ &= 33 \text{ cm}^2\end{aligned}$$
